

# Smart Technologies Document Camera

The doc cam allows you to display 3D objects, printed documents and microscope slides onto your computer or projector. You can also capture images and save them to a Smart Notebook software file or to an SD or SDHC member card.

## TWO MAIN WAYS TO PROJECT FROM THE DOCUMENT CAMERA

1. Connecting to projector (NO COMPUTER USE NEEDED)
  - Turn on the projector
  - Turn on the document camera
  - Adjust the document camera arm
  - Push input #2 on the transmitter inside the podium (labeled laptop/doc cam)
2. Operate through the computer within the Smart Notebook software
  - Turn on the projector
  - Boot up the computer
  - Turn on the document camera
  - Open the smart notebook software
  - Click on the icon of the document camera in the menu bar

### Parts of the Document Camera

#### Adjustable camera arm and camera head

You can unfold and adjust the camera arm. You can also rotate the camera head to display objects at range of angles. The camera head has a zoom dial, auto focus button and an LED camera light with a light switch.
